EXECUTIVE SUMMARY

Integrated Systems & Solutions Architect and Senior Java Application Engineer with over 30 years of multidisciplinary expertise. I bridge the gap between complex hardware realities and software logic, focusing on full-cycle product development—transforming ideas into polished, commercially deployed Java/JavaFX and Android applications.

I specialize in the “system at large”—a holistic, architectural view where software logic meets physical reality. My approach is disciplined: I handle the entire product lifecycle, from initial algorithmic modeling and domain analysis to UI/UX logic, database design, and commercial deployment. By applying deep systems engineering principles—rooted in decades of work with industrial electronics and embedded systems—to modern Java development, I create high-performance, maintainable, and robust software solutions. I actively integrate AI-agent tools to accelerate development while retaining full technical control over the final product.

CORE COMPETENCIES

Software Architecture & Development

Full-Cycle Product Ownership: Expert in the end-to-end development of desktop and mobile applications, covering requirements analysis, domain modeling, and commercial release.

Architecture & Design: System & Solution Architecture, Domain Modeling, Scalability Analysis, Performance Optimization, and Modular System Design.

Technology Stack: Java Development, JavaFX (Desktop Architecture), Android Development.

Workflow: AI-Augmented Development (utilizing LLMs for refactoring/testing), Technical Documentation, and Legacy System Modernization.

Systems Engineering & R&D Strategy

Engineering Foundations: Embedded Systems, Microprocessor Programming (Assembly/C), Industrial Automation, Power Electronics, and PCB Design.

Strategic Evaluation: Technology Readiness Level (TRL) Assessment, Technical Feasibility Studies, Scalability Analysis, and Innovation Audits.

R&D Management: Leading multidisciplinary R&D teams, project roadmap evaluation, and technical service strategy.

PROFESSIONAL EXPERIENCE

Independent Solutions Architect & Product Owner (2020 – Present)

Sitia, Crete | DmV Software

Full-Cycle Product Creation: Architecting and developing commercial software products (e.g., Concrete Works Cost Estimator Pro) from a conceptual idea to a packaged, multi-lingual desktop application.

Architecture for Performance: Designing robust, distributed software structures. I apply rigorous systems engineering principles to ensure maintainability, leveraging low-level engineering knowledge to write performance-critical Java code.

Solution-Driven Engineering: Bridging hardware-software gaps by creating high-precision engineering utilities for Android/Java, optimized for field conditions with complex unit transformation and technical formula handling.

Technical & Operational Management (Later Career)

R&D Laboratories & Industrial Engineering

Strategic Leadership: Managed R&D radio electronics laboratories and led multidisciplinary teams in production and commercial sectors.

Project Strategy: Evaluated hardware-software integration strategies, guiding the transition from functional prototypes to market-ready products.

Audits & Feasibility: Conducted rigorous audits to assess the viability, scalability, and implementation readiness of diverse engineering and software solutions.

Foundational Engineering & Design (Early Career)

R&D Laboratories & Industrial Systems

Design & Development: Full-cycle electronic system design, from schematic design and PCB development to fabrication supervision and calibration.

Microprocessor Control: Extensive development of microprocessor-based control systems (Assembly/C), providing a pragmatic foundation for performance-aware architectural decisions where hardware constraints meet software execution.

Specialized Systems: Expertise in power electronics, digital control systems, precision measurement, and insulation resistance monitoring.

SELECTED ENGINEERING & TECHNICAL PROJECTS

Concrete Estimation Suite (Java/JavaFX): Multi-lingual desktop application for automated calculation and PDF-based quoting, featuring localized EU formatting, persistent history logs, and full commercial packaging.

Engineering Utility Toolkit (Android/Java): High-precision mobile utility for complex unit transformations and technical formulas, featuring persistent operation history and optimized UI/UX for field conditions.

ROV Insulation Resistance Monitoring: Developed a microprocessor-based insulation resistance monitoring system for Remotely Operated Underwater Vehicles (ROV), ensuring critical system integrity.

Industrial Conveyor Automation: Designed digital control complexes for conveyor installations, providing automated management and system reliability.

Industrial Power Control: Created calculation methodology for air-gap transformers (welding/plasma) and power supply units for precision microcurrent/high-current applications.

EDUCATION & LANGUAGES

Master's Degree (Specialist) | Electrical Engineering and Electromechanics

Specialization: Industrial Electronics (Integrated 5.5-year program)

National University of Shipbuilding (NUOS) | 1982 – 1988

Languages:

Ukrainian/Russian: Native

English: Professional working proficiency (B2)

Spanish: Basic (A2)

Eligible to work in Greece. Open to collaboration on Integrated Systems & Solutions

Architecture, technical consulting, R&D projects, and full-cycle development of end-user software applications where deep systems thinking and practical engineering experience create measurable value.
